LIONS CANCER INSTITUTE INC

ANNUAL REPORT 2015 - 2016

SAVING LIVES IN YOUR COMMUNITY THROUGH RESEARCH AND SKIN CANCER SCREENING SINCE 1990

LIONS
L
INTERNATIONAL
®

PATRON
The Hon Kerry Sanderson, AC, Governor of Western Australia.

The Lions Cancer Institute has been providing, voluntarily, a much needed support to available health services. Initially this was provided in Western Australia and more recently in South Australia and New Zealand.

In addition to the top up funding allocated to PhD Students in cancer studies, the Institute has, since 1990, conducted free skin cancer screenings as a service to the public of Western Australia. This has been done with the assistance of a number of Plastic Surgeons, Dermatologists, Doctors, Dermographers, Nurses and Lions Members, all of whom provide their services free to the Institute.

The majority of these screenings are conducted in remote areas where such services are few, or non-existent. A service that has proven to save lives in our communities and will *continue to do so with our support.*

The Hon Kerry Sanderson, AC, Governor of Western Australia.

CHAIRMAN'S REPORT

PDG Colin C. Beauchamp AM JP
Chairman

It has been another very successful year for the Institute. The demand for visits by the mobile screening units continues to grow but Clubs need to understand the limitations of the service due to current staffing levels.

Clubs need to be reminded that requests for such visits must be with the board before the end of September the year prior to the event to give screening team members time to reschedule busy patient appointments.

The majority of the current screenings are done on weekends, the only time specialist, doctors and nurses can be available.

Requests for screening from businesses has also increased and whilst the teams do one or two each year they are only done where a substantial donation is offered for the service.

A number of barriers prevent the Institute from perusing commercial screening at this time. One is that we do not have sufficient trained qualified screeners who can be available during the week and our current operating, constitution, charitable institutions status does not make allowances for a commercial venture. To have paid staff screening, even if they were available, would require changes to the accounting system, insurances etc.

We now have more Doctors, Nurses and Lions who have completed the Dermoscopy course and are currently involved in the ongoing training program but as previously stated most of these are in full time employment which must take priority over the Lions screening project.

My thanks to all of those who assisted with the recent trip to MD Convention in Echuca, a fantastic public relations exercise that will have saved some Lions the problem of dealing with advanced skin cancer lesions providing they follow up the referrals?

Many of the current Governors and Vice Governors took the opportunity to visit the mobile unit , many returned later to discuss the project with a view to putting such a project to their Districts. Full details including cost estimates, plans and details about setting up the project has already been sent to two 1st VDG's.

Whilst at Convention the unit screened two hundred and sixteen (216) Lions and Partners, twenty nine (29) of whom were referred with possible life threatening lesions and eighty nine (89) of the total had not been screened regularly. The unit screened at Whyalla University on the return trip where two hundred and fifteen (215) patients were screened thirty seven (37) had possible life threatening lesions and a staggering one hundred and seventy two (172) of those patients had not been screened regularly, this would appear to be partly due to the lack of specialised services in the area. All of those suspect lesions are subject to further investigation although we have several pathological confirmations from the trip already.

The unit left Whyalla and moved to Esperance and then to Kalgoorlie where we experience two of the highest life threatening referral rates since the screenings started in 1990. In Esperance the team screened for two and a half days, the club indicated that they had sufficient enquiries to have booked out a full week, similarly with Kalgoorlie.

In Esperance the team screened three hundred and forty (340) patients, seventy five (75) had lesions that were possible life threatening and although the

mobile unit has visited Esperance before we still found that two hundred and seventy nine (279) had not been screened regularly.

The Kalgoorlie figures were of even greater concern. The team screened one hundred and eighty six (186) patients with a total of one hundred and thirty eight (138) lesions ninety (90) of which were considered possible life threatening and one hundred and thirty three (133) had not been screened regularly. Both of these results reinforce the need for the valuable service that the Institute mobile skin screening units provide.

The South Australian C1 and C2 Districts screening is about to move ahead rapidly. The funding from Lions Clubs International Foundation has now been approved and quotes are being obtained to build a trailer similar to the Western Australian unit and purchase suitable towing vehicle, it is anticipated that the unit will be in service by January 2017.
It should be noted that all funding for WA staff to assist in South Australia is met by the Lions Medical Research Foundation. The WA Institute has a memorandum of Understanding signed with LMRF for the joint venture. LMRF will be the legal entity for the project in SA.

All additional funding in SA has been in place for some time, when the motion was put to the C1 and C2 Conventions it was approved unanimously with a compulsory payment of five dollars ($5-00) per member pa. for the agreed life of the project. The additional financial support from clubs in both Districts has been exceptional.

Both SA districts have similar problems with distance as in WA, having to cover the Northern Territory as well. Requests from remote areas has resulted in the planning for an early trip to cover Darwin, Alice Springs, Tennant Creek, Katherine, Barrow Creek and Coober Pedy.

My thanks to Andrew Chapman and his team who continue to raise funds to support the free skin cancer screenings without which we would have to limit the valuable service the Institute provides to the people of Western Australia.

The Institute has for the past three years provided free skin screening on the foreshore at Cottesloe Beach as part of Melanoma week.

The photo was taken at Cottesloe when the foreshore project was acknowledged as The Best Community Service Event in Cottesloe for 2015.

PUBLIC RELATIONS AND NEW ZEALAND PROJECT

PDG Garry Irvine, Director, New Zealand Liason.

Public Relations

With our busy schedule of Skin Cancer Screenings we are in the public eye almost every third or fourth week and the visual presence in the name of Lions is highly evident. Our thanks to the Clubs that provide much needed funds to help us with the costs of keeping the vehicles mobile. To those Clubs that may have forgotten us, remember your donation to our work in bringing about the early detection of serious skin lesions saves lives, so please give your Lions Cancer Institute your Club's consideration. We rely heavily on Clubs funding us as all those donations are what we use to cover the screening costs here in WA.

Following the skin screening with Melanoma WA at Cottesloe this year we received an Award from that City which again gave us and Lions Clubs a great boost for the work that we do on behalf of your Clubs.

At the Echuca national Convention we proved the unequivocal value of our presence by not only finding serious life threatening lesions for a few of our fellow Lions, but also the incredible number of Lions from QLD, NSW and VIC. that visited with us and inquired about how they might set up similar services in their States. It was a most encouraging response which endorses the Board's decision to make the trip and attend. We received donations via a raffle run for us at the Convention as well as patients who attended at Echuca and also at Whyalla during the two days we were there. We also received a Certificate of Appreciation from the Convention Chairman in appreciation of our attendance which clearly gave acknowledgement of our contribution.

NZ Liaison

Progress has been rather slow since our first meetings with the Executive Officer David Dawick,ID Eric Carter and PDG Keith Kenderdine, however following a number of subsequent telephone conversations it is pleasing to know that a Committee has been established with the above-named and PID Lucy Armstrong and they will plan a strategy in support of establishing a national screening Project. The sentiment seems they are very keen to have such a Project it now requires this group to evolve the process. We continue to provide information to assist wherever we can.

The idea of having this as a Centennial Project for NZ is not a priority and will therefore proceed to a Club in the North Island for a suitable Motion and then to a District Convention, timing might likely be early 2017 for such a Motion to be put to delegates.

Garry K Irvine PDG 78/9
Director, NZ Liaison

Patients waiting for a screening.

PDG Darrel Mainard
Director

We have again enjoyed a busy screening schedule where we endeavour to cover an equal number of visitations north and south of the Swan river, this allows us to support the screening requests we receive from our W1 and W2 Clubs.

Following a review of the many requests we do get during any year we have now set up a facility on our website that allows Clubs to request a screening on line, once that is submitted an auto reply e-mail is sent back to the Club and then the Request is forwarded to the Screening Team to consider the requested date. It is important to note that all our screenings rely heavily on the availability of professional volunteers so at times requested dates may have to be amended before they are confirmed.

Our screeners are in constant demand and we continue to encourage support from new personnel where they are qualified. We do have opportunities for persons interested in joining our screeners but who have no formal qualifications, to consider a Certificate in Dermatoscopy. This Course is available on line from the Eastern Institute of Technology in NZ and we currently have a number of people who are taking that with a view to them participating in our programme. The Institute will assist with funding applicants on the proviso that once they have completed the course and become qualified they commit to attending 4/5 screenings in a year.

The following statistics relate to the period 1/7/15 – 30/6/16.

No. of screenings provided:

W1 District	21
W2 District	22

Of all patients screened the average rate for lesions found was >27%. This is consistent with preceding years and therefore reassures us that this result endorses the need for this service to all areas, particularly to regional communities.

In conclusion it goes without saying that we are grateful to all our screeners who volunteer time away from their jobs, professions and clinics to support this programme. Also a sincere thanks to those Lions Clubs that each year donate to cover the ongoing costs of the running of the vehicles.

Darrel Mainard PDG, Director

Morgan Lions and Chairman Colin gather after a recent screening.

Dr. Clare Harvey RN, BA(Cur), MA, PhD

Report for period ending 26th July, 2016
The Hawke's Bay Opportunistic Identification of Skin Lesions by Non-Medical Professionals

Report compiled by – Associate Professor Clare Harvey, Faculty of Health Sciences, Eastern Institute of Technology

New Zealand Team: Associate Professor Clare Harvey, Associate Professor Rachel Forrest, Dr Susan Jacobs, Ms Claire Zachan, Ms Jewelle Lloyd, Ms Natasha Ashworth, Ms Annatjie, Pretorius, Ms Sheryl-Lee Judd, Ms Theresa Styles, Dr Hugh Findlay, Dr Hannes Meyer

Australian Team: Mr Colin Beauchamp, Mr Chris Lowings, Mr Paul Katris, Mr Garry Irvine – Lions Cancer Institute, Western Australia (LCI), in association with Lifestream Health.

Progress to date
The short course online has attracted 33 students so far, with eighteen completing the course to date. Twenty-two of these students are domiciled in various locations across New Zealand, and 11 are from Australia. Ten students have completed the anonymous feedback survey on the course. A précis of the feedback is as follows:

- Nine indicated that the course was informative, whilst all the students said that the modules were informative.
- When asked if the photographs assisted in their learning, three students said they did very much, two students said quite a lot, four said it was average, and one student said that they did not help much at all.
- Seven students agreed that the tests at the end of each module were helpful in their learning, whilst three said that they did not help much, however, all nine agreed that the recorded tutorials enhanced their learning.
- Nine out of the ten students said that access to the lecturers was adequate.

Commentaries indicated that the course was comprehensive but too much for a forty hour course, with six saying that it took a lot more than forty hours to complete.

We will be reviewing the course once all the existing students have completed their learning, and we will take all the feedback provided, into consideration.

It has been difficult to plan any screening days for the New Zealand project, because of the challenge of getting experienced screeners to have a common day that they could come together for screening. It has therefore been postponed to a time to be arranged in spring. This will mean that the last cohort of students will have their workshop and an opportunity to work alongside experienced screeners delayed.

Dr Hugh Finlay has suggested that we consider expanding our project ethics to approach the medical laboratories for access to their statistical data on the number of biopsies that test positive for non-melanocytic and melanocytic skin lesions. This will be considered in the next stage of research development this year. Whilst building up a group of volunteer screeners that are required to sustain screening days, this method may be a way of collecting data that will complement existing information and collection methods.

The Australian screening is being managed in accordance with the LCI schedules and there are regular screening says in Western Australia, South Australia and Northern Territory. In order to continue capturing this data, the Australian ethics approval through Flinders University of South Australia, has been extended.

Outputs for the project this year are as follows:

Harvey, C, Forrest, R., Beauchamp, C., Pearson, M., Harding, T., Lowings, C. (2016) - Using nurses to forge a way to early detection of skin cancer. In RCN International Nursing Research Conference 6 –8 April 2016, Edinburgh International Conference Centre, Edinburgh, Scotland.

MEDICAL & SCIENTIFIC ADVISORY CHAIRMANS REPORT

Paul Katris
CEO WACOG

The Lions Cancer Institute's flagship cancer control activity is it's skin cancer screening program that it conducts with a team of dedicated plastic surgeons, dermatologists, GP's, nurses and the support of our participating clubs. Given this, it is important to always be aware of the human and financial impact of skin cancer on our community.

A new report released by the Australian Institute of Health and Welfare in July 2016 shows an increase in the number of Australians being diagnosed with skin cancer and the Lions Cancer Institute holds strongly that federal and State Government need to invest heavily in a national prevention campaign. Melanoma and skin cancer in Australia constantly needs attention.

Australia has the second highest rate of melanoma in the world, with more than 13,000 new cases expected to be identified in 2016 alone. That amounts to 49 cases of melanoma per 100,000 people compared to 27 cases per 100,000 people in Australia in 1982.

Nearly 1,800 people diagnosed with melanoma are expected to die of melanoma this year.

A person diagnosed with melanoma has a 90 per cent chance of surviving at least five years - much higher than the survival rate of all cancers, at 67 per cent. While the total number of new cases of non-melanoma skin cancer was unknown, it was estimated to account for more cases diagnosed than all other cancers combined.

In 2016, an estimated 560 people will die from non-melanoma skin cancer, with a death rate of 1.9 deaths per 100,000 people.

Hospitalisations for all types of skin cancer have increased significantly over the past decade. In 2013-14, there were over 23,400 melanoma-related hospitalisations in Australia, a 63 per cent rise from 2002-03.Over the same period, non-melanoma skin cancer-related hospitalisations rose by 39 per cent.

These are very sobering statistics clearly reflecting the significant personal and financial burden that skin cancer inflicts on Australians. They are also serve as a constant and poignant reminder for us all about why your Lions Cancer Institute is dedicated to the early detection of melanoma and skin cancer.

Paul Katris
CEO WACOG

Dr. Robert Fitzpatrick, plastic surgeon, accepting the Melvin Jones Fellowship Award for 22 years of support for the screening project.

NURSE PRACTITIONER REPORT

Chris Lowings

Chairman Colin, Nurse Practitioners Chris & Siva Lownings & members of the Kingston SA, Lions Club

The Lions Clubs of South Australia and Northern Territory (C1, C2) are moving quickly to respond to the skin cancer screening needs in our region by developing a service similar in nature to that of Western Australia. With the advent of our very own mobile screening unit we will be able to take the program to all parts of the C1 and C2 districts, just as LCI does in WA. With populations in rural and remote areas from Mt Gambier in the South East of SA to Darwin in the far North there will be a huge demand placed on the service which needs to be met. Our screening history in WA and, more recently, in SA has shown the results that come from the provision of the Skin Cancer Screening service, with many lives saved, or changed for the better. The challenge once the mobile unit is on the road, is keeping it there and ensuring that the program is flexible enough to meet the demands of delivering a service to those communities across the vast areas of the country that have need of the service we provide.

The mobile unit is anticipated to be fully operational from January 2017. The unit will be conducting screening visits all over the C1 and C2 districts and will, potentially, be in constant demand. An investment in resources of this magnitude requires some very serious support, not only financially but also by volunteers, in sufficient numbers, who are skilled and qualified to go out and conduct the screenings. The aim of the SA Screening Group is to have some 12 people trained and ready to roll by January 2017.

To this end, we have an active recruitment and training program in operation with a number of people, the vast majority of whom are either current or retired nursing staff already actively training. There are seven people already trained and able to screen independently, including one doctor at present, and we also have five other volunteers who are currently active within the training program.

We are aiming to increase the number of trained volunteers available to facilitate a very flexible, and responsive, service.
The basic training component is a short on-line course, which is conducted through the Eastern Institute of Technology, in Hawkes Bay, NZ; 'Skin Cancer Screening for Health Practitioners'. The on-line course is a collaboration between the Lions Cancer Institute of WA, Lifestream Health (SA) and EIT, NZ. The on-line program consists of a 40 Hour program. While being a health professional is not essential to serve in the screening program, the short course is designed to provide 40 CPD points to health professionals who are still currently working in order to encourage participation by trained health professionals. As part of their training trainees are invited to come along on the regular Lions Skin Cancer screening activities so as to gain experience with some 'hands-on' training in order to facilitate upskilling them as quickly as possible.

This very professional group of skilled people will represent the foundation of our screening group and will provide a flexible and responsive screening team that will ensure the unit is ready to go whenever and wherever it is tasked to provide a service to the community.

The C1, C2 joint Skin Cancer Screening Sub-Committee operates under the auspices of the Lions Medical Research Foundation is the group developing the mobile service under the guiding eye of Mr Colin Beauchamp JP the Chairperson of LCI WA who has been involved in skin cancer screening for 30 years.

Chris Lowings, RN, NP
Adelaide, South Australia

SOUTH AUSTRALIA/NORTHERN TERRITORY SCREENING REPORT

Marilyn Millar
Director of South Australia

Skin Cancer Screenings were conducted in Jamestown, Mt Barker, Minlaton, Whyalla, Naracoorte, Mt Gambier. The Western Australian mobile unit was brought to Echuca in Victoria for the Multiple District Convention and also screened in Whyalla on the way back.

The mobile unit was very well received and requests for screenings in the Northern Territory were recorded for inclusion in the 2017 screening programme. Requests for screenings in South Australia are also being received for the 2017 programme.

C Districts Skin Cancer Screenings Total Data to 30 th June 2016 is as follows:

Number people screened	5382
Number of females	2794
Number of males	2154
Number of at risk lesions detected and referred for further investigation	2176
Of which Suspect “life threatening” lesions detected	982
Number of volunteer hours (not including participating club members)	1406
Number of people referred to GP for further investigation	1319

24.5% of people screened were referred to their local General Practitioner for further investigation.

45% of suspect lesions detected were suspect life threatening.

Two trainee medical students attended one of the screenings held in a Flinders Rural Training Centre and spent a day each screening with Colin Beauchamp. Both students have indicated their interest in the Skin Cancer Screening Course.

Currently, the project has five screeners plus two screening under supervision. One retired enrolled nurse has applied for the course in the next semester with a retired registered nurse interested in the course in 2017. This will give the project the ability to increase the number of screenings per year. The Lions Medical Research Foundation has increased the allocated funding for the training of the screeners. The plans to purchase a mobile unit for the C Districts is progressing well with the approval of a LCIF grant for AUS $94,280 plus an ALF grant of $15,000 for C1 and $15,000 for C2 Districts. The total funds raised as at the 30 th June 2016 from grants, fundraising and Club donations is $243,270. Clubs have also committed and extra $97,000 for the running costs over the next five years.

2016-2017 will have the launch of the mobile unit and the continuation of the development of trained screeners. The subcommittee is continually increasing the profile of the project with the view of increasing financial support to provide this Lions Community Health Service.

The subcommittee has achieved their goals for the 2015-2016 year with the very strong support of the Lions Cancer Institute, Lions Medical Research Foundation, Lions Clubs International Foundation, Australian Lions Foundation, C District Governors, Club’s of the C Districts and the dedication of the subcommittee members.

Marilyn Millar
Director of South Australia

PhD STUDENT'S SECOND REPORT

PhD Student, Tracy Seymour

Firstly, as the recipient of the Lions Cancer Institute Top-up scholarship, I would like to sincerely thank the Lions Cancer Institute for their generosity and interest in my research project.

The financial support provided by the Lions Cancer Institute has allowed me to concentrate on my research project and allowed me to attend the Australasian Society for Stem Cell Research 2015 annual meeting held in Hunters Valley, New South Wales where I presented preliminary data showing abnormal gene expression found in adult brain tumours.

The continuous financial aid from the Lions Cancer Institute will also allow me to attend the COGNO annual scientific meeting in Sydney during September of this year where I have been given the opportunity to present a scientific poster.

My PhD research project investigates cancer stem cells and abnormal gene expression in the most common adult brain tumour, glioblastoma. Working with research groups at The University of Western and Telethon Kids Institute, I have identified several genes that are abnormal in this brain tumour. One abnormal gene identified is SOX2, a gene normally expressed by normal stem cells which suggest that this brain tumour may harbour cancer stem cells.

As there is no cure for this particular brain tumour, the need for new effective treatment is urgent. However, it is still unknown why the current clinically used therapies are not a cure. Therefore, I am currently treating brain tumour cells with clinically used chemotherapy drugs to determine if cancer stem cells and the abnormally expressed genes are the mechanisms behind tumour reoccurrence after treatment.

DISTRICT CHAIRMAN 201 W1

Mary Austin
District Chairman 201 W1

Another year gone and lots of ups and downs. Clubs do not seem to have much interest in having visits this last year. I am hoping that with new brochures to put together an information pack for all clubs.

Now we are selling the Sunsmudg sunscreen applicator, I am encouraging all clubs to contact us for their discounted product. This product is a great way to support the Lions Cancer Institute and benefit Club members, family and friends. They make a great present.

Again this year we have split our visits between W1 and W2 evenly. This will continue while we receive requests from W1 clubs.

Now you can apply online via the Website and make use of the opportunity to book a screening.

Are you interested in joining the team as a screener or driver? Contact the Institute, register your interest, and we will support you fully if you join the team.

Take responsibility for your health and have your skin screened yearly. If you are advised to see a doctor do so ASAP. We can only advise it is up to you whether you want to take the risk of waiting.

Mary Austin
District Chairman 201 W1

Prof. Kurt Gebauer accepting Global Appreciation Award for over 12 years of support for the skin screening project.

DISTRICT CHAIRMAN 201 W2

Roger Doyle
District Chairman 201 W2

During the past year the Institute has continued with the program of country screenings, completing 5 screenings in W2 with 12 more in the proposed program before the end of 2016. The program still suffers from having insufficient drivers and screeners to be able to meet all the requests placed upon the Institute and place a great deal of pressure on the existing volunteers.

Busselton provided the highest turn-out for screening with 128 people screened out of the 419 people who attended in the District. 98 of these (23%) were referred for further examination with 72 of the 419 (17%) being considered “Life Threatening Lesions”. The concerning statistic within these figures is that 37% of attendees had never previously presented themselves for screening.

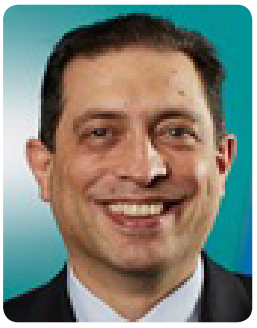
The benefit of the screening work being undertaken by the Institute can only be experienced by those who attend the screenings and to make better use of the van and coach that we have, not only do we require additional volunteers, but increased numbers at each screening will increase the benefit to our community.

As individuals our influence may be minimal but as a District we can make a big difference in many lives.

Roger Doyle
District Chairman 201 W2

Registration in the shade at Toodyay

REPORT TO THE LIONS CANCER INSTITUTE



Phillip Donato OAM
CHAIRMAN

The Lions Medical Research Foundation Inc (LMRF) has been given the oversight for the skin cancer screening project for the 201 C1 and 201 C2 Lions districts. The LMRF also funds PhD research scholarships and activities promoting health and disease prevention.

We are delighted and very much value the collaboration with the Lions Cancer Institute (LCI) in these joint screening activities. We wish to acknowledge Mr Colin Beauchamp AM for his tireless energy, experience, and great assistance with regard to this project.

Screenings in SA/NT were held again in the 2015/2016 financial year. During the past five years approx 5000 people have been screened. The Lions C Districts and LMRF have been given permission to purchase a purpose specific mobile unit to allow the screening of hopefully 5000 persons per year across predominantly South Australia and Northern Territory as from 2017.

Our results thus far have demonstrated that approximately 25% of all persons screened, have been identified as having suspected skin cancer lesions necessitating further medical investigations. The results so far show a similar consistency of findings to the skin cancer screening activities of the Lion Cancer Institute in Western Australia. Obviously the potential seriousness and impact upon the lives of Australians around the country is significant and must be pursued and continued as a relevant community health need.

We are pleased to report that we have secured funding to now purchase, build and fit out the mobile unit with the assistance from and under the supervision of the LCI, and secondly, have also obtained the additional funds required to manage the running costs in its first year of operation. We must thank the LCIF and ALF for their significant contribution and the many Lion Clubs who have donated to this cause. A thank you must be given to our current Deputy Chairman PDG Rhys Roberts for capably and successfully steering this project on our behalf. Further thanks to Marilyn Miller, Noel O'Brien, and Graeme Pascoe who have made significant and lasting contributions to this project.

Our very best wishes and thanks to the Lions Cancer Institute .

Phillip Donato OAM
Chairman: Board of Trustees
Lions Medical Research Foundation Inc

TREASURER'S REPORT

Neil F. Saunders
TREASURER

For the year ending 30th June 2016.

Our gross operating income was $16,361.40 less than last year, mainly due to another drop in Club donations. Despite 37.5% of Clubs in Western Australia supporting our Institute our income from clubs was down $6,713 on last year.

The Board Members are fully aware of the financial burdens Clubs are faced with, as active membership dwindles, and there are more demands for assistance, particularly in regard to natural disasters at home and overseas.

As part of the financial reports I have included a list of these clubs. I also sincerely thank our Corporate and Private Sponsors whose generosity helps the Institute keep the screening units on the road.

Again I would acknowledge the Armadale-Kelmscott Club as the only supporter of the Karen and Joshua Chinnery Scholarship Fund.

As part of the Institutes's obligations, financial support is provided to select Phd. Students to allow them to continue their research into causes, and possible cures, for Cancer related disease. You can read of their achievements in another part of this Annual Report.

Our Bank Interest, earned, was $4,012.98 less than the previous financial year. This was caused by extremely low Term Deposit rates available when we reinvested the Term Deposit.

Faced with dwindling income, and despite some criticism from a few Lions Members, the members of the Board again unanimously approved the instigation of a telemarketing fund raising venture.

The Board also approved the introduction of a Managed Fund Portfolio. The amount of $300,000.00 has been invested and despite a dip in value, as shown in the end of financial year figures, is outperforming Bank Term Deposit Interest Rates.

The Institute screening team is still keen to visit the remote areas of West Australia and is budgeting for a possible trip to the North West next year. Early budget estimates indicate a gross cost in excess of $25,000.00.

PDG Neil F Saunders
Treasurer

Lions Cancer Institute Inc

ABN 26 521 960 054

Your Directors present their report on the Institute for the financial year ended 30 June 2016.
The names of the Directors in office at the date of this report are:

Elected members:
PDG Colin C. Beauchamp AM JP. Chairman
PDG Pam Baird. Vice Chairman
PDG Garry Irvine. Director New Zealand Liaison
PDG Darrel Mainard. Director Skin Screening Administrator
Lion David Baird. Director Ass. Treasurer
Lion June Walker. Director
Lion Michael Wainwright. Director
PDG Robert Thomson. Director

Notes to the Financial Statements
For the year ended 30 June 2016

	2016 $	2015 $

NOTE 1: STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

(a) **Basis of Preparation**
This financial report is a special purpose financial report prepared in order to satisfy the requirements of Board members to prepare a financial report. The Board members have determined that the Association is not a reporting entity. The financial report has been prepared in accordance with the requirements of Association Incorporation Act 1987 (WA), the Australian Charites and Not-for-Profits Commission Act 2012, association regulations.

The financial statements have been prepared on an accruals basis and are based on historic costs and do not take into account changing money values or, except where specifically stated, current valuations of non-current assets.

The following material accounting policies, which are consistent with the previous period unless otherwise stated, have been adopted in the preparation of the financial statements.

(b) **Cash and Cash Equivalents**
Cash and cash equivalents include cash on hand, deposits held at call with banks, other short term highly liquid investments with original maturities of three months or less.

(c) **Property, Plant and Equipment**
Property, plant and equipment are carried at cost, independent or directors' valuation. All assets excluding freehold land, are depreciated over their useful lives to the institute.

Leasehold improvements and office equipment are carried at cost less, where applicable, any accumulated depreciation.

(d) **Revenue and Other Income**
Revenue is recognised when the amount of the revenue can be measured reliably, it is probable that economic benefits associated with the transaction will flow to the entity and specific criteria relating to the type of revenue as noted below, has been satisfied.

Revenue is measured at the fair value of the consideration received or receivable and is presented net of returns, discounts and rebates.

All revenue is stated net of the amount of goods and services tax (GST).

Sale of Goods
Revenue is recognised on transfer of goods to the customer as this is deemed to be the point in time when risks and rewards are transferred and there is no longer any ownership or effective control over the goods.

Interest Revenue
Interest is recognised using the effective interest method.

	2016 $	2015 $

Rendering of Services
Revenue in relation to rendering of services is recognised depends on whether the outcome of the services can be measured reliably. If this is the case, then the stage of completion of the services is used to determine the appropriate level of revenue to be recognised in the period.

If the outcome cannot be reliably measured, then revenue is recognised to the extent of expenses recognised that are recoverable.

Other Revenue
Other revenue is recognised when the institute is entitled to the funds.

(e) **Goods and Services Tax (GST)**
Revenues, expenses and assets are recognised net of the amount of GST, except where the amount of GST incurred is not recoverable from the Australian Taxation Office (ATO).
In these circumstances, the GST is recognised as part of the cost of acquisition of the asset or as part of an item of the expense.

Receivables and payables are stated inclusive of the amount of GST receivable or payable. The net amount of GST recoverable from, or payable to, the ATO is included with other receivables or payables in the statement of financial position.

(f) **Prior period Retrospective Restatement**
Provision for June 2015 Show account expenses of $45,795 was missed out in 2015 Financial statements. Comparative figures for 2015 year now restated in this financial statement. Because of this restatement, 2015 net income figure is decreased by $45,795 and payables figure increased by the same amount.

Comparative figures before restatement:

	2016 $	2015 $
Show account expenses	454,212	343,740
Net surplus/(deficit) from ordinary activities	(32,629)	77,931
Payables	84,706	-

Comparative figures after restatement:

Show account expenses	454,212	392,125
Net surplus/(deficit) from ordinary activities	(32,629)	32,135
Payables	84,706	45,795

DIRECTOR'S DECLARATION

Lions Cancer Institute Inc
ABN 26 521 960 054

BOARD MEMBERS' DECLARATION

The Board members declare that the Association is not a reporting entity and that this special purpose financial report should be prepared in accordance with the accounting policies outlined in Note 1 to the financial statements, the attached special purpose financial statements have been prepared for the purpose of complying with the Association Incorporation Act 1987 (WA), the Australian Charites and Not-for-Profits Commission Act 2012 and association regulations;

The Board members of the Association declare that:

1. the financial statements and notes attached give a true and fair view of the financial position as at 30/06/2016 and its performance for the year ended on that date in accordance with the accounting policies described in Note 1 to the financial statements;

2. in the Board members' opinion there are reasonable grounds to believe that the incorporated association will be able to pay its debts as and when they become due and payable.

This declaration is made in accordance with a resolution of the Board members.

INDEPENDENT AUDITOR'S REPORT
TO THE MEMBERS OF
Lions Cancer Institute Inc

Report on the Financial Report
We have audited the accompanying financial report, being a special purpose financial report, of Lions Cancer Institute Inc , which comprises the statement of financial position as at 30/06/2016, and the Income and Expenditure Statement for the year then ended, notes comprising a summary of significant accounting policies, other explanatory information and the Directors ' declaration.

The Responsibility of Directors for the Financial Report
The Directors of the association are responsible for the preparation and fair presentation of the financial report and have determined that the accounting policies described in Note 1 to the financial statements which form part of the financial report are appropriate to meet the financial reporting requirements under the under the constitution of the Association and are appropriate to meet the needs of the members. The Directors responsibility also includes establishing and maintaining internal control as the management determines is necessary to enable the preparation of a financial report that is free from material misstatement, whether due to fraud or error.

Auditor's Responsibility
Our responsibility is to express an opinion on the financial report based on our audit. We conducted our audit in accordance with Australian Auditing Standards. Those standards require that we comply with relevant ethical requirements relating to audit engagements, and that we plan and perform the audit to obtain reasonable assurance about whether the financial report is free from material misstatement. An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial report. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial report, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the association's preparation of the financial report which gives a true and fair view, in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the association's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the Directors, as well as evaluating the overall presentation of the financial report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Independence
In conducting our audit, we have complied with the independence requirements of Australian professional ethical pronouncements.

Basis for a Qualified Opinion
Cash Donations and taking are a significant source of fund raising revenue for Lions Cancer Institute Inc . The Lions Cancer Institute Inc has determined that it is impracticable to establish control over the collection of cash donations and takings prior to entry into financial records. Accordingly, as the evidence available to us regarding fundraising revenue from this source was limited, our audit procedures with respect to cash donations and takings had to be restricted to the amounts recorded in the financial records. We therefore are unable to conclude whether the recorded cash donations and takings of Lions Cancer Institute Inc are complete.

INDEPENDANT AUDIT REPORT

Lions Cancer Institute Inc
ABN 26 521 960 054

Auditor's Qualified Opinion
In our opinion, except for the possible effects of the matter described in the Basis of Qualified Opinion paragraph, the financial report presents fairly, in all material respects, the financial position of Lions Cancer Institute Inc as of 30/06/2016 and of its financial performance for the year then ended in accordance with the accounting policies described in Note 1 to the financial statements and the requirments of Association Incorporation Act 1987 (WA), the Australian Charites and Not-for-Profits Commission Act 2012 .

Basis of Accounting and Restriction on Distribution
Without modifying our opinion, we draw attention to Note 1 to the financial report, which describes the basis of accounting. The financial report has been prepared for distribution to members for the purpose of fulfilling the Board of Director 's financial reporting obligations under the constitution of the Association. As a result, the financial report may not be suitable for another purpose.
